RECOMMENDATION LETTER

There are over three years since we started the partnership with "ROSEAL" - Odoheim Seculesc in the area of sealing assembly. During this time we have appreciated the excellent quality of their products and also the professionalism and the promptness of the technical assistance we received from them.

We are using ROSEAL products both for the nuclear and the conventional side of the plant and the results are very good and at the same quality level as similar products of other companies such as BURGHMAN and JOHN CRANE.

However, the best attribute of this company is the responsibility it offers in business and its high interest for the development of long term relationship.

These are the main reasons for which we strongly recommend "ROSEAL" to all companies involved in power industry.

Ing. Șof Mărianța
