RECOMMENDATION LETTER

Few years ago we started a partnership with ROSEAL SA Odorheiu Secuiesc in the area of sealing assemblies. During this time we have appreciated the excellent quality of their products and also the professionalism and the promptness of the technical assistance we received from them.

We are using ROSEAL products on our pumps, turbines and compressors very successfully, the quality level being similar to their competitors' products, such as BURGMANN and JOHN CRANE, SEALOL.

However the best attribute of this company is the responsibility it offers in business and its high interest for the development of long term relationship.

These are the main reasons for which we strongly recommend ROSEAL to all companies involved in power industry.
